New developments in digital treatment planning, intra-oral scanning, and traditional workflows, have improved the treatment planning process and the final outcome for patients. These advances have streamlined the patient workflow and have created a more effective method for communication among the specialist, the general dentist, and the dental laboratory.

Course Objective:

- Understanding the digital workflow.
- Overview of IOS file transfers between Collaborative partners.
- Demonstration of a dental implant IOS and new developments in standard impression taking.
- Review of collaboration tools through an Integrated treatment workflow that connects all treatment team members. Overview of restorative options for temporary and definitive restoration
