Tech Talk

Quarterly Newsletter

By: Declan Duggan

What not to miss at Technic Dental Lab in Q4.

You don't want to miss our 45th Anniversary Open House event on Wednesday, December 6th 2023(5-8pm). This event is a casual and fun way to network with doctors in your area while learning about cutting edge technology that's defining the future of dentistry. Meet and greet Technics' staff and multiple reps from the biggest names in dental technology. Trios and iTero reps will be on hand to introduce their newest scanners and walk you through a brief demonstration if desired. Intraoral scanners, 3D printers and milling machines are the future, and we're running affront the pack when it comes to perfecting the application of these devices in

our lab. As the integration of this technology is quickly becoming the norm, we want to be ahead of the game and we want you to be there with us. With new technology comes a learning curve. If we all experience this individually, why not get together and discuss this

with the reps who market and sell these products so we can all learn and grow together? Don't miss this great opportunity to gain critical insight as to where people are experiencing difficulties, and how to overcome any struggles that might arise.

Digital Dentures! Are we there yet?

Are dentures stuck in analog manufacturing? Will AI, automation and CAD/CAM make digital dentures the wave of the future? Great questions to ask, and we'll have the best people on site to give you the most up to date answers on this topic and many others as alike. What kind of strength is necessary for digital dentures to be successful? Does flexibility play a bigger role than tensile strength in making a long lasting digital denture? Come find out!

How does Technic stay ahead of the learning curve?

Staying informed and current in the field of dental technology is vital to our success as a company and integral in the treatment of your patients. At Technic, we strive to be at the forefront of these advancements so your patients get the best products available. We never rest when it comes to education and that's the standard around here. Who did we send out this month to discover the future of dentistry, and what did they study? Here's the answer. We've been quite busy as of recent. We took three trips in the past month or so and brought back so much vital knowledge we can't wait to share with you. Cameron and Jeff went to Charlotte, North Carolina to the Dentsply Sirona Academy for a 2 day continuing education class hosted by Jimmy Stegall. The topic of this session was digital dentures. Cameron and Gina went to Atlanta, Georgia for a class hosted by Zircozahn at their education center. The focus of this retreat was milling, zirconia in general and shade matching with this material. This 2 day class was their 10 year symposium. Finally, we sent Cameron, Amber and Zoltan to the American headquarters for Asiga in Ann Arbor, Michigan. The focus of this retreat was using 3Shape for interpreting and creating digital dentures. This common theme is the wave of the future, and we've got a jump start on it. Come talk to our technicians at our open house to find out how we're putting this knowledge to use. That's a wrap for the moment folks, stay tuned for the next edition of Tech Talk coming out in January. Happy Holidays from Technic!
