Quarterly Newsletter

By: Declan Duggan

What's New in Q2-2025?

Education and technology are Technic's two focal points outside our daily routine. From 9-5, we're at the bench, but we never stop when the bell rings because we know you don't either. The dental industry has seen many changes over the years, but never quite as quickly or decisively as we're experiencing currently. It's not all "out with the old and in with the new" either, because the old ways are what defined our roles and remain the foundation we continue to build upon. The new way is refining and polishing patient care and lab production flows. It's the implementation of amazing technological assets in the hands of well-trained doctors and technicians who understand the analog production flows and help to integrate digital aspects when and where necessary to expedite patient care.

Technic Travels for Education

While we continually offer as much CE as possible at the lab, we also seek out personal opportunities to learn from the best, so we too can enhance our abilities and produce the best restorations and appliances at an affordable price. Mike Capps (owner of Technic) had the pleasure of catching up with a great friend of many years while attending an educational conference in sunny Ft. Lauderdale, FL on removable prosthodontics. "Dr. Gordon J. Christensen, DDS, MSD, PhD led this all-day course which was very well received," exclaimed Mike. "Dr. Christensen did a fantastic job explaining his protocols on removables. From what works & what doesn't, costs involved, implants & overdentures, all the way through materials & techniques he uses himself"-Mike. This kind of education is priceless when properly implemented in our lab, and vital to our growth.

Q2 CE Events at Technic

Technic hosted "Nexus Nights" -Discover the 1st AI Powered Complete Digital Full-Arch Workflow on April 2nd 2025. Although the weather outside was definitely frightful, our guests were quite comfortable as they enjoyed a great meal while taking in vast amounts of information from our two amazing speakers (Colin Purser-Keystone & Kevin Stack-Nexus).

While we continue to host our Spear Study Club sessions in-house on the 3rd Thursday of the month (10 sessions per year), we'll also be venturing out later this month to Spear's campus, located in the heart of Scottsdale, AZ, for our annual CE trip to Spears national headquarters. If you feel like you're missing out, there's plenty of time to get registered for next years' trip while enjoying the remaining in-house modules through 2025.

Dates for upcoming events such as "Locator Fixed" by Zest Dental are currently pending, but in the works. So too are "Sip & Scan" events similar to the one we hosted last year, where doctors and staff can come sit-in on an evening of numerous reps and multiple cutting- edge intra-oral scanners for you to discover and demo. If you have questions about scanners and/or our labs ability to work with digital files, please give us a call, as we'd love to help in any way we can.

**As Always, Thanks for Choosing
Technic Dental Lab!**
